Mark H. Goldwater

857-998-8328 | mgoldwat@mit.edu | mark-goldwater.com

EDUCATION

Massachusetts Institute of Technology &   *September 2021 – Present*
Woods Hole Oceanographic Institution Joint Program

Ph.D. Student in Electrical Engineering and Computer Science & Applied Ocean Science and Engineering
Advised by: Julien Bonnel and Daniel P. Zitterbart, GPA: 5.0/5.0

Franklin W. Olin College of Engineering   *August 2017 – May 2021*
B.S. in Electrical and Computer Engineering
GPA: 3.97/4.0

Relevant coursework: microcontrollers, software systems (C/operating systems), controls, Bayesian statistics, partial differential equations, wireless communications, microelectronic circuits, data structures and algorithms, discrete mathematics, computer architecture.

RESEARCH

Woods Hole Oceanographic Institution
Woods Hole, MA   *June 2020 – Present*
- Currently fusing methods in machine learning with underwater acoustics to solve inverse problems
- Application areas of interest include source localization, bioacoustics, remote sensing of marine populations, and low-cost robotic sensing

Franklin W. Olin College of Engineering
Needham, MA   *September 2019 – May 2021*
- Implemented an infrared (IR) communications link to transmit an acknowledgement of data receipt (ACK) on the uplink of a hybrid radio-frequency (RF) and visible-light communications (VLC) system
- Designed digital circuit logic to process the ACK
- Enabled the system to coexist on the same network with other 802.11-compatible devices that are sending data on the system's uplink over the saturated RF spectrum

Massachusetts Institute of Technology (MIT) Lincoln Laboratory
Lexington, MA   *May 2019 – August 2019*
- Developed system to calibrate an infrared camera to serve as a highly accurate power meter in a laser communications terminal testbed
- Designed signal processing algorithm in MATLAB to detect non-functioning camera pixels and account for them in the power calculation

Franklin W. Olin College of Engineering
Needham, MA   *January 2019 – May 2019*
- Developed open-source software to detect and catalog near-Earth asteroids using telescope images
- Implemented a preprocessing pipeline to account for thermal noise and varying pixel sensitivity in images

INDUSTRY EXPERIENCE

General Electric (GE) Healthcare – Senior Capstone Project
Milwaukee, WI   *September 2020 – May 2021*
- Developed improved digital intercom for Computerized Tomography (CT) machines to facilitate better communication between the patient and operator
- Enabled technicians to interface less directly with patients through improved audio communication to reduce the likelihood of COVID-19 transmission

Track Information, Inc.
Boston, MA   *June 2018 – August 2018*
- Designed and prototyped RESTful API for a mobile app to track a user's health statistics using React Native in JavaScript as well as Ruby on Rails
- Engineered the app's backend data flow to easily interface with third-party APIs

PROJECTS

Domain Adversarial Neural Network (DANN)   *November - December 2022*
- Implemented a DANN based on a paper from <u>Ganin et al.</u> in Pytorch to perform unsupervised domain transfer for the detection of impulsive baleen whale vocalizations
- Data consisted of 6-second audio snippets of simulated impulse calls with added experimental noise and snippets which consisted only of experimental noise
- The source data (labeled) was from the Bering Sea and the target data (unlabeled) was from Cape Cod Bay
- Achieved over 90% accuracy on the unlabeled target data

Orthogonal Frequency-Division Multiplexing (OFDM) Implementation   *April 2021*
- Implemented an OFDM receiver and transmitter from scratch using MATLAB
- Tested using B210 USRP software defined radios, and achieved a throughput of 1.2 Mbps with BPSK symbols and 0% error

OceanSense – Ocean Measurement Platform   *October – December 2020*
- Designed a PCB using KiCad to monitor environmental conditions during ocean science experiments at the water's surface for up to seven days
- Device measured air temperature, surface humidity, and acceleration data
- Logged data to an on-board SD card for further processing

Image Inpainting   *May 2020*
- Implemented an inpainting algorithm in MATLAB using partial differential equations that fills in missing sections of images
- Created problem set and solution guide to teach image inpainting and its mathematical underpinnings to peers

Magnetic Levitation Control System   *May 2020*
- Developed a mathematical model and simulation of a permanent magnet positioned under an electromagnet
- Implemented a PD feedback control loop to levitate the permanent magnet and tested it in a custom simulation
- Successfully implemented the control loop on a realistic computational model of the system (rather than a physical system due to COVID-19)

Schroeder Reverb in C   *March 2020*
- Implemented the Schroeder reverberation algorithm in C to add a reverb effect to music in a mono-channel 16-bit WAV file
- Built custom buffer data structures, a WAV file parser, and digital comb and all pass filters

American Sign Language/Spoken English Translation System   *July 2019 - January 2020*
- Designed and presented system concept to take a user-oriented approach to the creation of an American Sign Language (ASL) language model to facilitate translation from ASL to English and vice versa
- Began initial data collection of ASL video data to train a machine learning model
- Spoke to local deaf and hard of hearing organizations to guide the design process

Digital Morse Code Decoder   *December 2019*
- Designed and simulated a digital hardware system that takes Morse code input from a button and outputs the ASCII codes of inputted letters on LEDs
- Successfully programmed and tested the digital circuit on a Zybo Zynq-7000 FPGA SoC Trainer Board

Multi-Cycle CPU   *November 2019*
- Designed, implemented, and simulated a multi-cycle CPU, using the MIPS architecture, in Verilog
- Wrote custom assembly programs to solve the Tower of Hanoi problem, the Spinout puzzle recurrence relation, and others to test the architecture

Computer Vision Assisted Origami   *May 2018*
- Created software that used an overhead camera and a homography transform to project origami instructions onto a piece of square paper
- Used Python and OpenCV to calculate and display the projections on an assistive screen

Active Noise Cancellation
December 2018
- Implemented Least Mean Squares (LMS) adaptive filtering in MATLAB to cancel background noise in a speech recording
- Implemented an ideal Wiener filter to characterize and cancel the noise as a benchmark

Inverted Pendulum Control System
November 2018
- Implemented a PI control loop using Arduino C to enable an inverted pendulum robot to balance upright
- Modified the feedback loop to direct the robot to translate forward much like a segway

Braille Sheet Music Printer
October - December 2018
- Designed and built a device that can convert digitized music into braille sheet music and print it
- Implemented the electrical system and guided integration of the software, hardware, and electrical subsystems

3D Infrared Scanner
September 2018
- Designed and 3D-printed hardware for a two-servo tilt/pan scanning mechanism
- Wrote software using Arduino C to take distance measurements and create a 2D projection of the scanned item by converting from spherical to Cartesian coordinates

Autonomous Robot Obstacle Course Navigation
May 2018
- Implemented the RANSAC algorithm that used LiDAR data to map an obstacle course which consisted of boxes and fences to block the robot
- Imposed a vector potential field on the model of the course and used gradient descent to navigate to desired coordinates while avoiding obstacles

Facial Recognition Software
March 2018
- Implemented the Eigenfaces facial recognition algorithm which achieved 95% accuracy on a data set of 50 individuals with a 1.09 second runtime
- Also implemented the Fisherfaces facial recognition algorithm to better account for intraclass variance

Boat Hull Stability Simulation
February 2018
- Implemented a 3D boat simulation in MATLAB to simulate the angle of vanishing stability (AVS) for various hull designs to predict at which tilting angle the boat would capsize
- Constructed final boat hull which met the design goals of having an AVS between 120 and 140 degrees and floating flat

AWARDS, SCHOLARSHIPS, AND FELLOWSHIPS

1. National Defense Science and Engineering Graduate (NDSEG) Fellowship, $122,400 plus tuition, health insurance, and travel funds (2022 - 2025)

2. National Science Foundation Graduate Research Fellowship (2022, awarded & declined)

3. Woods Hole Oceanographic Institution's Summer Student Fellowship, $6,500 (June 2020 - August 2020)

4. 1st Place Overall in MIT Lincoln Laboratory's Intern Innovative Idea Challenge plus funding to continue work during the fall 2019 academic semester (July 2019)

5. Best Poster in MIT Lincoln Laboratory's Intern Innovative Idea Challenge (July 2019)

6. Franklin W. Olin College of Engineering's four-year half-tuition merit scholarship, $100,800 (2017 - 2021)

TEACHING AND MENTORING EXPERIENCE

Woods Hole Oceanographic Institution Woods Hole, MA

Duke University Master's in Interdisciplinary Data Science capstone co-advisor   August 2021 – May 2022

Franklin W. Olin College of Engineering Needham, MA

MTH2110: Discrete Mathematics	September 2020 – December 2020
Mathematics Tutor	January 2020 – April 2020
ENGR3420: Introduction to Analog and Digital Communication	August 2019 – December 2019
CIE2018A: Quantitative Engineering Anlysis I	January 2019 – May 2019
Academic Resource Co-Designer	August 2018 – May 2021
OIE1000: Olin First Year Introduction	August 2018 – December 2018
ENGR1125: Introduction to Sensors, Instrumentation and Measurement	August 2018 – December 2018

EXTRACURRICULARS AND COMMUNITY ENGAGEMENT

"Frankly Speaking" Student Newspaper – Editor	August 2020 – May 2021
STEM K-12 Outreach Activity Design and Research	January 2020 – January 2021
Habitat for Humannity Volunteer	March 2018
Student Government – Representative for Campus Services	January 2018 – December 2018
Campus-wide silent auction organizer	November 2017
International Aerial Robotics Competition Team	September 2017 – February 2019
Engineering Discovery (K - 12 STEM outreach)	September 2017 – January 2018

TECHNICAL SKILLS

Languages: C++, C, Python, MATLAB, Java, Verilog
Tools and Libraries: Tensorflow, Pytorch, NumPy, OpenCV, Git, KiCad, 3D Printer
